SKILLS

Languages

Python, JavaScript, SQL, HTML, CSS

AI & Data Analytics

Data cleaning, data preparation, data validation, EDA, predictive modelling, model evaluation

Machine Learning

Linear regression, decision trees, random forest, gradient boosting

Data Tools

KNIME, SAS Viya

Web / Frameworks

React, Vite, Tailwind CSS, Bootstrap 5, Flask, Node.js, Express.js, Sequelize

Databases / Tools

MySQL, SQLite, Git, GitHub, VS Code, npm, REST APIs

SOFT SKILLS

Communication • Problem Solving • Logical Thinking

CERTIFICATIONS

IBM SkillsBuild

Web Development Fundamentals

User Experience Design Fundamentals

WAI YAN HPONE LAT

APPLIED AI & ANALYTICS STUDENT
AI / DATA ANALYTICS INTERNSHIP CANDIDATE

SUMMARY

Year 2 Applied AI & Analytics student at Nanyang Polytechnic with hands-on projects in data cleaning, predictive modelling, model evaluation and full-stack web applications. Built analytics workflows with KNIME/SAS Viya and practical systems using Python, SQL, JavaScript, React, Flask and Node.js.

EDUCATION & COURSEWORK

Diploma in Applied AI & Analytics, Nanyang Polytechnic

Expected Graduation: May 2028

Bachelor's in Computer Engineering & IT, Mandalay Technological University (COE) | 2019-2020

Studies discontinued due to COVID-19 disruption and political instability in Myanmar.

Myanmar Matriculation Examination - 5 Distinctions | 487 marks / 600 | Academic Year 2018-2019

Relevant Coursework:

AI & Data Analytics
Predictive Analytics & Forecasting
Web Development Project
Database Design & Administration

Data Structures & Algorithms
Full Stack Application Development
UX Design in Web Development
Networking Technologies

PROJECTS

Gym Calories Predictive Analysis

Tech Stack: KNIME | SAS Viya

- Cleaned and validated a 4,865-row gym dataset by removing duplicate and invalid records, producing 950 validated records for modelling.
- Built and evaluated regression, decision tree, random forest and gradient boosting models using a consistent 70/30 training-validation partition.
- Analyzed feature relationships and validation results to compare predictive performance and communicate model findings.

Annual Leave Management System

Tech Stack: React | Vite | Tailwind CSS | Node.js | Express.js | Sequelize | MySQL

- Built a two-stage Supervisor-to-Manager approval workflow with role-based request states and controlled approval progression.
- Implemented comments, rejection reasons, audit history, reminders, notifications and validation for traceable leave-processing workflows.
- Integrated responsive React interfaces with REST API routes and Sequelize/MySQL models for database-backed leave operations.

Invoice Dashboard & Payment Tracking System

Tech Stack: Python | Flask | JavaScript | Bootstrap | SQLite

- Built a dashboard showing paid revenue, outstanding balances, invoice count and overdue count for faster invoice monitoring.
- Implemented payment recording, Paid/Outstanding/Overdue status logic, client search, status filtering and input validation.

NYP Chess Club Website + Live Ratings Widget

Tech Stack: HTML | Bootstrap 5 | JavaScript | Python | Chess.com Public Stats API

- Built a responsive club website with an embedded ratings widget and dynamic member-rating display using public Chess.com statistics.
- Automated hourly rating updates with Python and integrated the generated widget into the homepage through an iframe-based workflow.
