

WAI YAN HPONE LAT

APPLIED AI & ANALYTICS STUDENT | SOFTWARE & DATA INTERNSHIP CANDIDATE

Singapore | +65 9897 4250 | waiyanhponelat.eduvalor.2024g@gmail.com
teddy-qyuon-portfolio.vercel.app | github.com/TeddyQyuon | linkedin.com/in/waiyanhponelat

PROFILE

Year 2 Applied AI & Analytics student at Nanyang Polytechnic. Builds React applications, Python and Node.js APIs, and data workflows. Personal projects are developed with AI assistance, code review and test verification. Seeking software engineering, full-stack development or data/analytics internship opportunities.

Internship availability: 29 March 2027 - 28 January 2028 (44 weeks). **Expected graduation:** May 2028.

EDUCATION

Nanyang Polytechnic | Diploma in Applied AI & Analytics | 2025 - 2028

Current cumulative GPA: 3.18. Coursework: Full Stack Application Development, Data Wrangling, Predictive Analytics & Forecasting, Data Structures & Algorithms, Responsible AI for Sustainability, UX Design, Database Design & Administration and AI & Data Analytics.

Mandalay Technological University (COE) | Computer Engineering & IT Studies | 2019 - 2020

Completed 1 year and 1 semester. Studies interrupted following COVID-19 disruption and subsequent instability in Myanmar.

Myanmar Matriculation Examination | 2018 / 2019

487 / 600 marks; 5 distinctions in Myanmar, Mathematics, Chemistry, Physics and Biology.

SELECTED PERSONAL PROJECTS

Project direction, implementation and release checks with AI assistance. Detailed evidence and current limitations are available in the linked portfolio.

SOLE DISTRICT - Streetwear Commerce Platform

React | Django | PostgreSQL | Stripe | Vercel

Built an editorial storefront and Django commerce workflows with SKU stock, customer recovery and protected merchant tools. Deployed storefront/API; catalogue and imagery are illustrative. Payments remain disabled; owner credentials and email delivery need setup.

SCENTHAUS Intelligence - Fragrance Discovery & ML

React | FastAPI | PostgreSQL | scikit-learn | MLflow | Stripe

Integrated a 35-house, 150-reference catalogue, bottle-size Quick add, explainable recommendations, demand forecasts and server-priced Stripe checkout. Historical customer behaviour is simulated; Stripe payments use test mode.

MeterWise - Estate Energy & Facilities Analytics

React | TypeScript | FastAPI | SQL | Recharts

Developed energy dashboards, validated CSV imports, tenant views, alert investigations and estate maintenance workflows. Estate inventory uses public HDB data; meter readings and work orders are simulated.

Playlist Port - Spotify Playlist Copying

React | Node.js | Express | Spotify Web API | OAuth 2.0

Built same-account and second-account playlist copying with server-held tokens, pagination and verified item order. Supports Free and Premium accounts. Development-mode accounts require owner approval; other music services are planned.

WAI YAN HPONE LAT

TECHNICAL SKILLS & FURTHER PROJECT EXPERIENCE

TECHNICAL SKILLS

Languages & frontend: Python, JavaScript, TypeScript, SQL, HTML, CSS, React, React Router, Vite, Material UI, Tailwind CSS, Bootstrap.

Backend & integration: FastAPI, Django, Flask, Node.js, Express.js, REST APIs, OAuth 2.0, Stripe integration, signed webhooks.

Databases & security: PostgreSQL, MySQL, SQLite, SQLAlchemy, Sequelize, sessions, JWT, password hashing, CSRF and role/ownership checks.

Data & modelling: KNIME, SAS Viya, NumPy, pandas, scikit-learn, PyTorch, MLflow; cleaning, validation, exploratory analysis and model evaluation.

Development: Git, GitHub, VS Code, npm, Postman, pytest, Vercel.

SCHOOL PROJECTS

Annual Leave Management System - Team Project, Member 3

React | Vite | Tailwind CSS | Node.js | Express | Sequelize | MySQL

My documented work focused on the Supervisor-to-Manager approval flow, final-approval leave deduction, delegation and acting approvers, comments/rejection reasons, audit history, notifications and reminder/escalation logic. Contributed integration and debugging, including protection against rapid duplicate submissions.

Gym Calories Predictive Analysis

KNIME | SAS Viya

Prepared 950 validated records from 4,865 raw observations by removing duplicates and invalid heart-rate records. Compared regression, decision tree, random forest and gradient boosting models on a consistent 70/30 partition, and communicated feature relationships and validation results.

HACKATHON WORK IN PROGRESS

ScamDar - HackIT 2026, Four-Member Team

React | FastAPI | Python | SQLite

Built a working local prototype with mentorship and AI assistance. The prototype explains suspicious-message risks and supports community reports, votes, comments, trends and trusted-contact links. Continuing refinement; no hosted release is claimed.

EARLIER PROJECT EXPERIENCE

Invoice Dashboard & Payment Tracking System

Python | Flask | JavaScript | Bootstrap | SQLite

Built invoice/revenue summaries, payment recording and Paid/Outstanding/Overdue states, with client search, status filters and input validation.

NYP Chess Club Website + Live Ratings Widget

HTML | Bootstrap | JavaScript | Python | Chess.com Public Stats API

Built a responsive club website with an embedded ratings widget. Automated hourly public-rating updates with Python and integrated the generated widget using an iframe.

CERTIFICATIONS & SOFT SKILLS

IBM SkillsBuild: Web Development Fundamentals; User Experience Design Fundamentals.

Soft skills: Communication, problem solving and logical thinking.
